

AYUSH BHATT

Software Developer Specializing in Backend Systems, Workflow Orchestration & Scalable Cloud Platforms

+91 9369528635 @ bhattayush15@gmail.com https://www.linkedin.com/in/ayushb5/ Bangalore, India

SUMMARY

Results-driven Software Developer at Rupeek Fintech with a strong foundation in Computer Science, Full-Stack Engineering, and AI-driven systems, specializing in building scalable, event-driven fintech platforms. Proven experience architecting end-to-end workflows using Java Spring Boot, Zeebe, and cloud-native services, delivering production-grade solutions that directly impact customer experience and operational efficiency. Known for driving complex integrations across lenders, payment systems, and third-party providers while maintaining backward compatibility and platform resilience. Adept at translating ambiguous business requirements into robust, observable, and secure systems, from mechanized e-Sign pipelines to bulk financial processing and controlled feature rollouts. Thrives in fast-paced environments by collaborating closely with product, QA, and cross-functional teams to ship reliable solutions at scale.

SKILLS

Technical Skills

Python, Java, Node.js, SQL, Kafka, SpringBoot, Flask, AWS, Docker, MySQL, REST, Git, Postman, JIRA, Linux, HTML, CSS, JavaScript, SQLite, MongoDB, Selenium, Camunda Modeler, SQS, Redis, Jenkins

Core & Functional Skills

Problem Solving, Analytics, Debugging, Optimization, Scalability, Automation, Reliability, Innovation, Development, Deployment, Testing, Teamwork, Monitoring, Documentation, Collaboration, Leadership, Communication

EXPERIENCE

Software Developer

Rupeek Fintech 09/2025 - Present Bangalore, India

- End-to-End Workflow Architecture & Delivery:** Architected and delivered the part-release slot booking capability using Java Spring Boot and Zeebe, designing new workflows, DTO layers, and an order-level data model. Integrated Salesforce ticketing to enable 500+ customers to successfully book slots within the first two weeks, dramatically improving operational throughput.
- Lender-specific Platform Integrations:** Led part-release integration for lender SIB, building Zeebe orchestration pipelines, service contracts, and compatibility layers. Ensured seamless onboarding without impacting full-release workflows or customer journeys.
- Digital Automation:** Built an e-Sign pipeline linking payment events and signing providers for a paperless, compliant document execution for customers and lenders.
- Feature Rollout & Risk Control:** Enhanced platform resilience via Flag smith city-wise rollouts. Implemented renewal blocking (cityId + loanRequestId), and rebate cancellation APIs to control feature exposure and mitigate risk.
- Scalable Bulk Processing Systems:** Designed and implemented a bulk file upload system that validates GL IDs, publishes verified documents to SQS, and uses authenticated data as the source of truth for downstream processing—enabling scalable and reliable bulk operations.
- Financial Computation & Data Integrity:** Built automated interest flows for unsecured components using validated GL IDs, ensuring accurate computations and consistent data across systems.
- Distributed Workflow Orchestration:** Integrated Zeebe-based workflows with SQS, payment platforms, and third-party providers, accelerating feature delivery while improving system resilience and operational visibility.

PROJECTS

SteagnoMask

Python | Flask | SQLite | HTML | CSS | Machine Learning | Git

- AI Data Protection & Ethical ML Design:** Designed a Flask-based system to embed hidden digital watermarks across images, videos, audio, and text, enabling creators to control unauthorized AI training on their data.
- Model Behavior Manipulation & Impact Analysis:** Introduced micro-interference patterns to redirect ML model learning, reducing image classification accuracy from 95% to 40% and text sentiment accuracy from 76% to 50%, validating effectiveness.

QR Buddy

Python | Flask | HTML | CSS | SQLite | Git

- Scalable Event Management Platform:** Built an end-to-end ticketing and attendance system with QR-based verification, admin controls, and automated email notifications, handling 2,500+ API requests.
- Production Deployment & Team Leadership:** Deployed the solution across 3 large-scale events (500+ attendees each) and led backend development while integrating frontend modules in a 3-member team.

CORE COMPETENCIES

Backend Engineering & API Architecture

Problem Solving & Algorithmic Thinking

Cloud Computing & Distributed Data Systems

Technical Leadership & Cross-Functional Alliance

Performance Optimization & System Reliability

Artificial Intelligence & Ethical ML Systems

MLOps & Data Pipeline Automation

KEY ACHIEVEMENTS

Google Digital Leader – Cloud Certification

- Demonstrated strong understanding of cloud computing fundamentals, Google Cloud services, data management, security, and digital transformation strategies.
- Validated ability to align cloud solutions with business goals, enabling scalable, secure, and cost-effective system design.

Google Professional Project Management Certification

- Gained hands-on expertise in Agile and Scrum methodologies, project lifecycle management, risk mitigation, and stakeholder communication.
- Applied structured project management practices to cross-functional technical projects, ensuring timely delivery and measurable outcomes.

INTERNSHIP EXPERIENCE

Software Developer Intern

Rupeek

05/2025 - 09/2025 Bangalore, India

Data Analyst & Web Developer Intern

PreProd Corp

11/2023 - 05/2024 Bangalore, India

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering

Vellore Institute of Technology

09/2021 - 06/2025 Bhopal, India

PUBLICATIONS

IEEE Publication (Nov 2024 – Mar 2025)

Co-authored an IEEE paper introducing a novel micro-interference framework to protect multimedia data from unauthorized machine learning usage.
